Graphical tools: create and edit technical drawings using 2D graphics. Technical modeling tools The Table-Top user interface for AutoCAD is controlled by two panes that are linked by a vertical split line. The left side of the drawing area contains the drawing object. The right side of the drawing area contains editing tools such as the pencil tool. AutoCAD has several tools and buttons for zooming and scrolling, and it can also be operated using keyboard shortcuts. AutoCAD provides a floating toolbar for easily navigating through the drawing environment. Toolbars for the various drawing components are placed near the top of the drawing area. Drawing is a process of creating, editing, and maintaining drawings. There are three main drawing components: Drawing objects: geometric elements such as line segments, circles, arcs, and splines. Layers: assign colors to individual objects, define the visibility of objects, and provide a basis for distinguishing different types of objects. Bookmarks: mark objects within the drawing, identify specific parts of the drawing, and tie objects to other drawings. Drawing elements: the various geometric features that can be placed in a drawing. A layer is a group of drawing objects that share the same drawing color or are assigned to the same visibility level. Layers are used to organize and manage

### AutoCAD Crack + X64

Starting with AutoCAD 2014, several new libraries were added to the Visual LISP programming environment: uihelp, viewer, report, codeplex. Autodesk LiveCode From version 2013, Autodesk released its own scripting language, called LiveCode. LiveCode allows users to write scripts on a desktop application. It is available as an add-on for AutoCAD, AutoCAD LT, Inventor, Revit, Architectural Desktop, BIM 360 and as a stand-alone application. LiveCode is also used by the Autodesk BIM 360 product suite as a BIM-specific scripting language. Autodesk LiveCode is also used in the Autodesk Inventor software. Autodesk LiveCode is also built into many of the AutoCAD user interface elements. Visual Basic for Applications In 2006, Autodesk released Visual Basic for Applications (VBA). VBA is an add-on for the AutoCAD program, which enables users to automate and customize AutoCAD, as well as create macros to automate other programs. The add-on can automate and customize functions in AutoCAD, such as user interfaces, drawing functions, command-line and registry-based operations. A number of other AutoCAD add-ons and programs (notably Inventor and Revit) also support VBA. Autodesk also provided a similar scripting language called Visual LISP for VBA. ObjectARX In addition, Autodesk released ObjectARX to the public in 2007. ObjectARX is a C++ class library used as the base for products such as AutoCAD Architecture, AutoCAD Electrical, AutoCAD Civil 3D, Autodesk Dynamo, Autodesk Eco, Autodesk Inventor, Autodesk Revit, Autodesk Revit MEP, Autodesk Vectorworks and Autodesk Maya. ObjectARX is a component-based automation development framework. It simplifies the development of product-specific automation solutions for the most popular AutoCAD platforms and integrates them via C++. According to the ObjectARX website: "ObjectARX provides a set of tools and utilities that help to automate your work with CAD files. It lets you write your own classes that represent the various objects in your drawings and/or a DLL module that runs from a CAD document. These tools are completely independent of the drawing objects
