The main Object tools are the Rectangular Marquee tool and the Direct Selection tool. The Rectangular Marquee tool is used to cut out an object from an image or object. The Rectangular Marquee tool is like the Cut tool from Microsoft Word or the Crop tool in Microsoft PowerPoint. You can drag a box around an object, then click a corner of the box to delete the highlighted object. The Direct

Ezekiel 65:2 says, "Also you, son of man, place your face between the legs of the sanctuary." This act leads to something much deeper. This act can create new life and new perspective. God gives his life to us when we place our face between the legs of the sanctuary. If you place your face between the legs of the sanctuary, God

will focus on you. God will renew the people because he wants to see our heart. God wants us to see what he sees. God's heart beats for us. He wants to show us that he is the author of life. God is life. God has eternity. God wants to live on the throne and is bringing us into his presence. I remember at the beginning of my life as a Christian, I was saying, "I don't know what it is that people want to tell me about my life." God said, "That's not true. God is showing you. God is doing his work in you." When I say, "God is showing me," he is showing me what he sees in me. God is

showing me what he sees in me. God wants to say to my heart, "I am showing you. I am doing my work in you." God's vision is, "I'm more than just a god of the past or a god of the future. I am the creator of all life. I'm present now. I'm present in your life. I am the present King." Jesus is the Alpha and Omega, the first and last. "I am here for you to see what I've created. I'm showing you what I can do in you. I'm telling you that I am the author of life." When I place my face between the legs of the sanctuary, God will restore me in my life and my relationship to him. We are going to

create life together. We are going to heal our broken hearts. We are going to live again.Q: How do i split a string in my function and use those parts in the function? I am trying to get a value by using the textbox value. The getDataFromTextBox() function is used to get the value and inside
